AUDIO MIXER, LOUDSPEAKER AND POWER AMPLIFIER COMBINED!

When it comes to setting up a portable sound system, traditionally, you'd need to configure multiple components, including an audio mixer, a power amplifier, and a loudspeaker. This process can be both time-consuming and costly. However, the IVA **Companion 118** offers an elegant solution to simplify your setup and save you money. It's an all-in-one portable speaker system that combines all these crucial elements into a single, compact package.

Loudspeaker
(To produce sound.)

+

Audio Mixer
(To mix various audio signal into unified output.)

+

Amplifier
(To amplify the signal to drive the speaker.)

=

Companion 118

FEATURES

Small, compact & lightweight portable all-in-one loudspeaker

High power 150 Watt with **high SPL** of 118 dB

Superb bass response which frequency response as low as 52 Hz

Battery powered which **last up to 20 hours** of usage

Built-in reverb effect for karaoke and singing performance

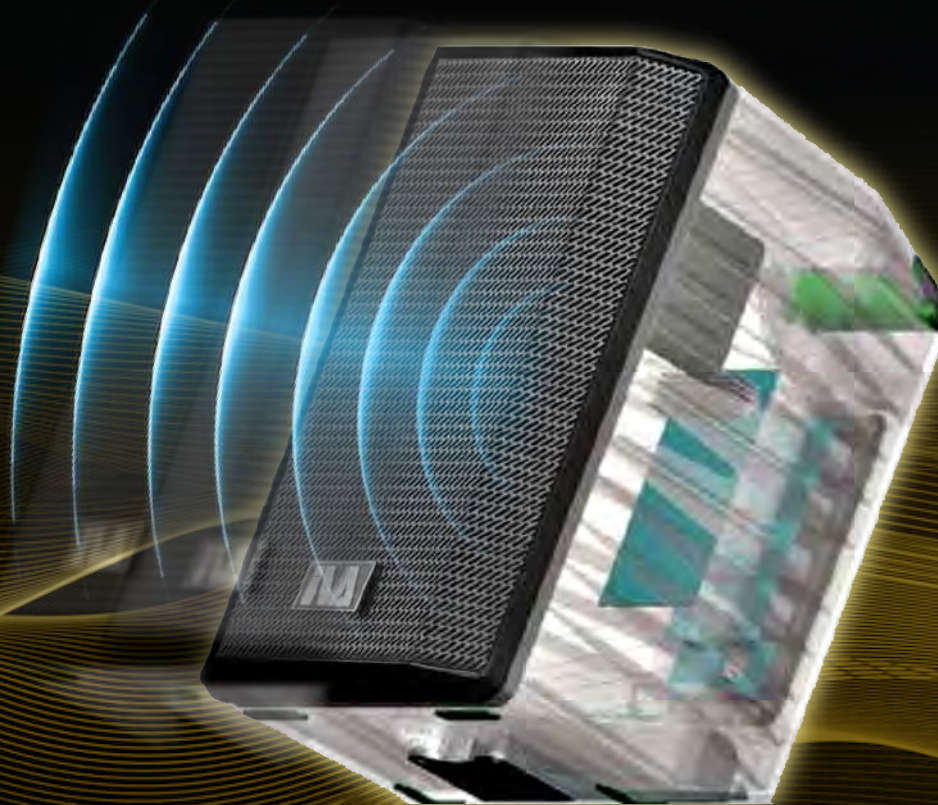

Built-in Feedback Suppressor to reduce annoying feedback frequencies

Multi-angle deployment for various mounting applications

118dB IN A COMPACT FRAME

Don't be fooled by its size, though, as its audio quality and sound pressure level deliver jaw-dropping performance. With the max Sound Pressure Level (SPL) of 118 decibel, the IVA Companion 118 is truly remarkable and lives up to the "listen to believe" moniker, showcasing its unbeatable sound quality and features.

** The size is to scale to average Asian men.*

SOUND FREEDOM WITH LONG-LASTING BATTERY

What truly sets the IVA Companion 118 apart is its built-in battery pack. This feature grants you the freedom to use the sound system without being tethered to a power outlet. Whether you're hosting an outdoor event, a mobile DJ gig, or simply enjoying music on the go, the Companion 118's built-in battery ensures that you can take your sound wherever you please, without limitations. What's more impressive is that the Companion 118 can last up to 20 hours of playback and can be fully charged in 3 hours' time.

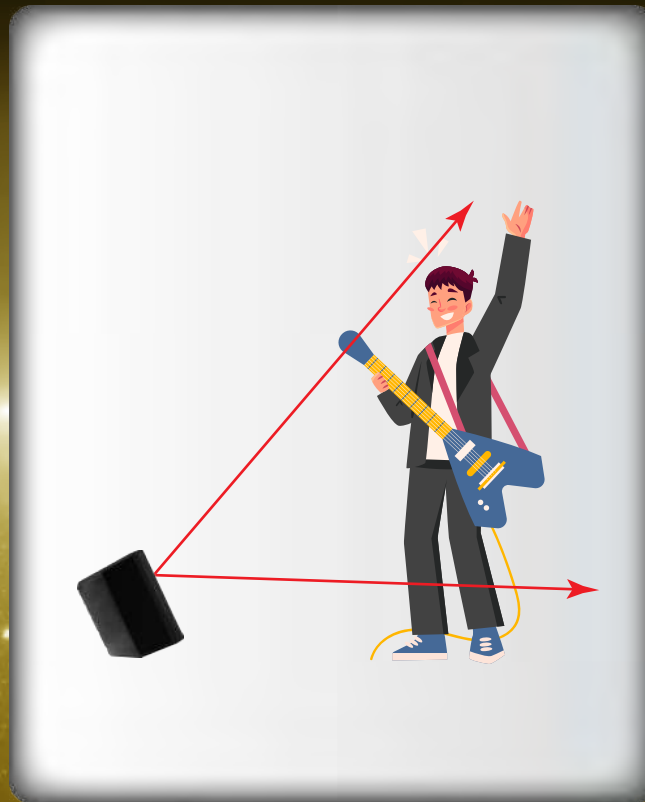

FLEXIBILITY IN SOUND DEPLOYMENT

The ingenious multi-angle positioning of this portable loudspeaker provides users with the utmost flexibility in its deployment. Among the most fundamental methods for positioning a loudspeaker is placing it on the floor. However, the adjustable angling feature in the Companion 118 allows you to tilt the portable speaker upwards, redirecting the audio output towards the audience, whether they are standing or sitting. This is particularly beneficial since listeners' ears are typically positioned at a height above the ground, not at floor level.

YOUR LIGHTWEIGHT SOUND COMPANION

Weighing in at a mere fraction of traditional sound systems, the Companion 118 is an ideal choice for individuals on the go. Whether you're a mobile DJ, musicians, buskers, a presenter at different venues, or simply someone who loves to enjoy high-quality audio in different locations, the Companion 118's lightweight build ensures that you won't be burdened by heavy equipment during transportation. The compactness of the Companion 118 means that it can be effortlessly stowed in the trunk of a car, in a small storage space, or even carried by hand without the need for additional assistance. This makes it a versatile solution for those who frequently need to move their sound system from one location to another.

6.7kg

GOODBYE TO ANNOYING FEEDBACK

When the audio system reaches high volume levels, it can become challenging as the reproduced sound loops back into the system, resulting in a disruptive screeching known as feedback. The Companion 118 portable speaker includes a feedback suppressor to effectively eliminate this bothersome issue. By mitigating this problem, the system's performance is significantly enhanced, allowing singers and users to enjoy the system to its fullest with contented hearts.

SPECIFICATIONS

Model	Companion 118
Description	Battery Powered Portable Speaker System
Transducer Low	1 x 8" Woofer
Transducer High	1" Voice Coil
Horn Coverage	100° H x 60° V
Frequency Response (-3 dB)	52Hz-20khz
